

Care Instructions for Commercial Woven Polyester Printed Fabrics

- Separate from heavy soiled items prior to washing do not wash with cotton or cotton / polyester fabrics to avoid attracting lint colours and whites should be washed separately
- Warm hand wash / warm gentle machine wash, overloading of a washing machine can give rise to a form of creasing known as pressure creasing, Therefore, unload by up to 25% in open pocket machines and up to 50% may be required in some pocket-type machines.
- Do not use soap, use a specially formulated detergent compound.
- Avoid thermal shock by cooling down the load gradually particularly after the hot wash and during the rinsing stages. Fabric temperatures must be below 60°C before extraction or before cold rinsing occurs.
- Do not clean with any form of solvents. Use formulated detergents only.
- For best results hang curtains by their hooks, immediately to avoid creasing.
- After washing and hydro extracting, these fabrics can be tumbled dried
- Iron temperatures must not exceed 120 degrees and should not be held in one spot for longer than 20 seconds
- Tumble dryers should again be underloaded between 25-50%. If overloaded proper tumbling action and air circulation will not occur as the fabrics are packed too tightly in the Cylinder.
- Load should only be dried to an exhaust air temperature of 80 Degrees c. cool down dryer to room temperature by ventilating in a rotating drum before dryer is turned off. Remove fabrics quickly and fold. Greater care must be taken if calendaring.
- **Dry Cleanable at P50**
- **Washable at 56.8°C**
- Possible shrinkage 3%
